## About me

I am an RF and Wireless Systems Engineer with 7+ years of experience in wireless communications and RF systems, holding a PhD in Telecommunications Engineering. My expertise spans RF systems development, antenna and front-end design, experimental RF validation, channel estimation, machine learning and system-level performance evaluation, supported by extensive hands-on experience with laboratory RF instrumentation. Experienced in translating system requirements into RF architectures, designing and prototyping measurement systems and developing algorithms and tools for wireless system analysis and evaluation. Proven ability to lead technical projects and collaborate effectively with industry partners and multidisciplinary engineering teams.

## Professional Experience

- 2026- Postdoctoral Researcher Vienna, Austria  
Institute of Telecommunications, TU Wien
  - Lead research projects with industry partners on the development, implementation and validation of machine-learning-based channel models for next-generation wireless communication systems
  - Design and prototype RF transceiver systems across sub-6 GHz and millimeter-wave bands, covering antenna and front-end design
  - Lead and execute RF measurement campaigns to characterize propagation and real-world wireless system performance
  - Develop Python/MATLAB-based algorithms and tools for measurement automation, RF data processing and performance evaluation
  - Supervise undergraduate students in RF system development, experimental research and measurement campaigns
  - Coordinate technical activities across multiple teams
- 2021-2026 University Assistant Vienna, Austria  
Institute of Telecommunications, TU Wien
  - Designed and evaluated multi-band wireless systems
  - Developed channel estimation and beamforming algorithms for millimeter-wave MIMO communication systems
  - Collaborated with industry partners on joint projects
  - Presented research results at international conferences
  - Participated actively in the COST Action INTERACT network
- 2025 Visiting Researcher Lund, Sweden  
Department of Electrical and Information Technology, Lund University
  - Conducted sub-6 GHz and millimeter-wave MIMO field trials and characterized RF performance under various mobility conditions
  - Developed and evaluated machine-learning-based algorithms for improving millimeter-wave MIMO receiver performance
- 2024 Visiting Researcher Los Angeles, CA, USA  
Wireless Devices and Systems Group, USC
  - Developed advanced receiver architectures and signal processing techniques for millimeter-wave MIMO systems
  - Designed and prototyped a beamforming wireless system operating at THz frequencies
- 2019-2021 Project Assistant Vienna, Austria  
Institute of Telecommunications, TU Wien
  - Developed and tested millimeter-wave transmitter architectures
  - Designed and prototyped RF front-ends on printed circuit boards
  - Designed, characterized and prototyped antennas

## Education

- 2021-2026 PhD in Technical Sciences Vienna, Austria  
Faculty of Electrical Engineering, TU Wien  
Thesis: Millimeter-Wave Communications Using Sub-6 GHz Out-of-Band Information
- 2018-2021 Master's Degree Vienna, Austria  
Faculty of Electrical Engineering, TU Wien  
Thesis: Emulation Techniques for High Speed Train Measurements in 6G Mobile Communications
- 2013-2017 Bachelor's Degree Sarajevo, Bosnia and Herzegovina  
Faculty of Electrical Engineering, University of Sarajevo  
Thesis: Measurement of Error Probability in a Hardware-in-the-Loop Simulation Environment
